

## **Audio Script**

Hello dear listeners! This is your humble daughter, Koudjoukalo.

Today, I want to tell you about a natural solution that could transform our fields: neem extract.

You too have probably noticed that our crops are increasingly being attacked by insect pests. These pests are destroying our crops and threatening our harvests.

These pests are one of the major challenges that is growing in importance and undoubtedly leading to undesirable yields. To combat these insects, we use chemicals that also have harmful consequences. So, we thought of an alternative: using neem to protect our fields.

Indeed, chemicals have a hidden cost: they destroy beneficial insects, deplete our soil, and harm our health and that of our animals. As a result, we are witnessing the emergence of diseases such as cancer and diabetes, and some animals are becoming rare. Why continue this way when natural solutions exist?

Natural solutions like neem. Yes, this plant, which many of you are already familiar with, could be our ally. Its extracts, whether essential oils or the solution made from neem leaves, are natural, preserve our soils, and repel pests without the harmful effects.

Neem is more than just a remedy, it's a lasting solution.

I know what some of you are thinking: Is neem really effective? Isn't it too complicated to use? It's true, using neem requires a little effort, but the results speak for themselves. Plus, it's an accessible method, which you can already find in our markets. So why continue to use chemicals that cost us dearly in terms of health and the environment? Let's choose to alternate with natural extracts like neem, other local plants, or even ash. This will benefit our soils, our crops, and especially our health and that of our children.

Dear listeners, dear farmers, let us take care of our land and our health!

**Thank you for your kind attention.**
